

Envoy® Exhibit System –
Sleek and Streamlined

Designed for Style and Purpose

Sleek and streamlined Envoy® gives exhibitors the unrivaled advantage of a clean, modern look in a lighter weight custom modular system. Envoy is designed to allow graphics to stand out with Skyline's exclusive FlexLock® Fabric Connection System, which conceals fabric to hardware connection.

Structural Inline Exhibits

Create distinctive inline exhibits that provide a big brand presence along with the functionality to meet any objective. Stylish Envoy offers shelving for products, lockable counters for technology and storage, and a variety of lighting options.

Interactive Kiosks

Envoy elegantly supports flat screens, computers and key-boards for presentations and demonstrations. With its 4-inch panel depth, Envoy neatly conceals technology connections and electric cords to maintain a clean look.

Envoy is also designed to accommodate double-sided graphics, which is perfect for kiosk and island applications.

Unique Island Exhibits

Custom modular Envoy has cross-compatible straight, curved and angled components and connections to create the look that's right for your brand. Ceilings help define space and create a warmer environment for attendees.

Envoy works seamlessly with other Skyline modular systems to create the perfect design solution.

Custom modular Envoy can be designed to fit your every need. Built-in counters or seating add functionality for staffers while maintaining a design that is seamless and streamlined.

Versatile and Functional For Many Uses

Today's savvy consumers are developing a greater awareness of design. With that in mind, Envoy was designed with an eye towards the clean aesthetic of modern graphics, products and architecture – setting a completely new benchmark for exhibit design.

Meetings, Demos, Merchandising

What are your objectives? Envoy's flexibility allows you to create built-in meeting areas with seating, interactive presentation and demo stations using the latest technology, and elegant product merchandising with optional LED lighting.

Brilliant 2-Sided Backlighting

Stand out with double-sided backlit graphics! Envoy, with Skyline Performa® fabric and energy-efficient Skyline LED lighting, attracts attention and hides all wires for a clean look.

Skyline's proprietary Performa® Display Fabric is designed for backlighting. Specific thread shape and density promote even light diffusion across the panel surface and reduce hot spots.

Multiple Shapes For Any Design

Envoy's family of components – rounded, square and angled – allow you to create the look that represents your valuable brand.

Designed for Impact and Efficiency

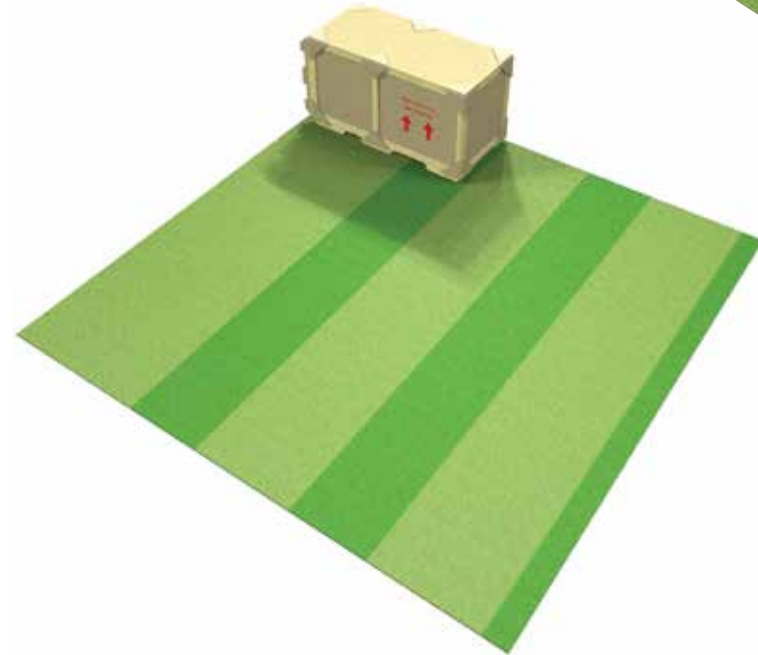

Big impact, lower costs. Envoy is compatible with other Skyline modular systems so you can create any look for any objective. Modular systems also have the added benefits of lighter weight, smaller packing, easier installation, the flexibility to change design, and reduce your overall operating expenses.

Easier Installation

Skyline custom modular systems are designed for quicker, easier installation to reduce costs. Skyline installation technicians are highly trained for efficient I&D.

Packs Small

Streamlined systems and fabric graphics pack extremely small. For example, excluding center tables and stools, this exhibit fits in just one crate!

Available for Rent

Reduce your shipping, drayage and storage costs – and increase your ROI. A study by *Tradeshow Week* proved that Skyline's custom modular exhibits weigh 60% less than traditional custom exhibits which reduces expenses and can save thousands show after show.

Versatile For Multiple Spaces

Change Footprint, Graphics

Different shows, different spaces. At some shows it makes sense to down size your exhibit space – and expenses – to maximize your ROI. Skyline custom modular exhibits give you the ability to make changes from show to show without compromising design appearance. You can also easily change your graphics to adapt to different markets, divisions and messages.
