

TUBE ULTRA® & TUBE SYSTEM

Skyline®

Tube Ultra® & Tube System
Sleek and Streamlined Modular Systems

Tube Ultra® & Tube System

Skyline Tube Ultra is the sleek system for exhibitors who require structure to support product and presentation equipment, but want to avoid the weight and cost of systems that were designed to create larger exhibits. Most tubes have slots on all four sides for accessories or wire management. **Tube System** has thicker components which may be better for large structures and come with or without slots.

10' (3 m) Inline Exhibits

The flexibility and strength of Tube Ultra and Tube System allow you to create exhibits of many designs, sizes and shapes. Both systems work seamlessly with other Skyline systems to provide a complete exhibit solution for your specific objectives.

Structural Island Exhibits

Tube System, with or without slots, is heavy-duty and allows you to build big. Nearly limitless designs are possible with compatible curved and linear components along with large-format fabric graphics.

Larger Inline Exhibits

Tube Ultra has structure to support accessories like flat screens, A/V equipment, shelving, literature holders and more. For inline exhibits, it can be a lighter weight alternative to Tube System which supports even more weight, but is larger and heavier.

Tube Ultra and Tube System work seamlessly with other Skyline modular systems to create the perfect design solution.

Product Merchandising

A variety of shelves and accessories showcase nearly any product and are supported by branded fabric graphics. All are easily repositioned to accommodate changing needs.

AV & Technology

Tube Ultra and slotted Tube System easily support technology for presentations or interactive demonstrations. Flat screens can be repositioned and slots conceal connection wires.

Fabric Graphics

Big fabric graphics support your message. Skyline fabric graphics are bold and durable. They are highest the quality available to best represent your valuable brand. Graphics are available in opaque or sheer to create a variety of looks.

Protective Cases and Crates

Components pack neatly in protective cases, compartmentalized crates that have easy access and wheels for easy transport, or sturdy wooden crates depending on your exhibit design.

“Skyline made the effort to meet our requirements and go beyond our expectations.” – Accord Healthcare (Intas)

Modular Flexibility

Modular components allow you to create exhibits of varying sizes. If you are starting small, you can add components as you grow.

Flexible to Fit Your Objectives

Accessories and Stand-off Graphics

Flat screens, shelves and literature holders add functionality to your exhibit. Profile-cut shapes, precision-cut from a variety of materials, add dimension to your brand. All are repositionable to any point along slotted tubes.

Streamlined Fabric Connection System

For Tube System without slots, fabric graphics are installed over the tube. For Tube Ultra or Tube System with slots, graphics can be attached within the slots for a clean, streamlined look.

Detachable Graphics

Graphics simply attach to square, flat surface tube components with grippers and are easy to change-out when your message changes.

Custom Color Tube

Tube Ultra and Tube System components can be professionally powder-coat painted by Skyline to complement your brand.

Integral Workstations

Skyline panel systems attach directly to Tube Ultra to create workstations that are truly integral – eliminating redundant structure and reducing costs.

Solid Panel Textures and Graphics

Tube Ultra and slotted Tube System support both fabric and rigid panels that are available in a variety of surface textures and colors.

Rental is a Flexible Option

Exhibit rental can be a solution for occasional exhibitors, special events and more. Tube Ultra and Tube System components and accessories are available for rent.
